

VEHICLE MAGNET USE & CARE

Clean surface with mild soapy water as needed.

Remove magnets from vehicle surface once a week during favorable weather. Remove daily during rain, when traveling on treated surfaces or before a hearty mud bogging.

Once removed, clean the backside of the magnet and the vehicle surface with mild soapy water. Allow both surfaces to dry completely before placing on vehicle surface.

When not in use, store on any magnetic, flat surface. Freezers, toolboxes and steel doors work splendidly. The magnets should be stored separately. Not stacked atop one another.

If magnet does not lay flat on vehicle surface, do not attempt travel.

If magnet becomes bent or misshapen, allow magnet to lay flat in direct sunlight. A vehicle hood works well.

Thank you for your business. Enjoy your new magnets!
