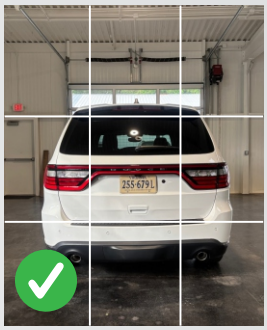
PHOTOGRAPHY TIPS

Help us accurately layout your project!

Level & Centered



Standing in the center of the vehicle & making sure there is space in front of and behind the vehicle ensures the accuracy of the design layout.
(Photos of Driver and Passenger sides are preferred incase of differences)

Measurements

The Front of the front door at the bodyline

The best way to provide measurements of a project is to provide 2 photos for each measurement taken.

One at the tip of the tape measure & one at a recognizable spot on a level line.
(door edge, headlight, taillight)

Most doors are curved; to provide an accurate measurement, it is important to see the locations that the measurements were taken.
